

Dorchester July 8<sup>th</sup>

My dear A.

Thanks for your  
kind letter. I am getting  
really through my work now.  
I see the end of putting &  
but the great criticisms  
Abrahamson's & Critique  
from my journal, are not nearly  
dry yet. The weather however  
improves, & I can now  
earnestly hope to get down  
soon. Now too the weather  
has cleared beautifully & I  
want to be in the field.

Muller is working too, as hard  
as his deer lets him & I  
have had a good <sup>deal</sup> to do bringing  
the Barrens to rights, for  
excellent as Muller is as to

Calculations - he does  
not push ab. entire ones  
or new laws for reduction  
&c. he is daily  
Expecting a box of Barometer  
tubes, & I have ordered  
to new tubes from England  
with Goddards (I hope my  
father will honor the bills)  
what other instruments for  
England. Also 2 portable

Barometers of Accuracies constant,  
which are got Scots Museum  
No. <sup>Calcutta</sup> No. 110 are used during things  
by halves & over during is  
impossible.

Many thanks for the offer  
of the Russian but please not

Answer: what will - my  
chart & x. I am busy all  
night.

Wallen chow took good  
to hours to work out, there  
being no tables for such  
low temperatures; it comes  
out: 16642 ft. - the Calcutta  
observation giving only 21<sup>th</sup>  
difference for the day's run.

I like to get things so done,  
because it will give (as the  
Gambles say) the Sunner.

The elevation I reached in  
Kangla chow Pass 15.746.

Chonijerwa Pass 15.186.  
I have still Kangra Pass to  
work, about equal Kangla chow  
Pass. Jangri i.e. the

Elevation I reached in Kumbhar  
with entire a fearful calculation

as the little Burmese was  
injured

Wallachum is a good way  
N. of top of Kinchar (i.e. N.W.)  
Gangpa is I presume the  
loftiest permanently inhab.  
village on this side the  
Himal. ~~that~~ has ever  
been visited. I have not  
worked it out yet: but I  
presume it is 13500 or 14000 ft.

I do wish you would come  
& travel with me on my  
return from Terai, there is  
no view of Nepal, Sikkim  
& the snows at all to compare  
with it.

You remember a H. Terai  
had an very curious & I  
ought to go over them with you  
if the weather clears I shall

get down in a week -  
what Terai. primitive shale  
thing?

I cannot conceive what  
has come over Dalmeier, who  
I must give up if things  
go on so he certainly has  
again afforded the excellent  
Colonel & I cannot but  
think he is crazed. I shall  
send my things to the garden  
as usual, but take my books,  
who goes with them, & keep  
an eye to their being looked  
after & their deposit to me.

I wish you could have a  
talk with Darwini, we  
shall be improved & make  
2 of a quartette. Harkness

quity at his name is  
Kew. I was not aware  
of that unless just about  
the sick-woman's developments  
if it were somewhat  
more than is other matters?

Praise my gentle babies  
my Dad mentions a lot of  
it - So I doubtless has given  
in, not fallen as the babies  
know it, in my opinion. How  
I am beautiful glad that the  
Soldiers had such the credit  
of taking it. Though clearly  
humiliating we ought to  
feel it, that it was sub-  
stormed by us finally & still  
Even at so late a day.

name that it was sub-  
titled several ago.

This bright day is quite  
shining.

I am in affectionate

J. J. Hooker
