

Wm. Brew

8 Feb 1845.

My dear Sir

I saw in looking over the list

of birds that the Pelican Measurement  
to the 2. grand allis coll. coll.  
has not been marked that at the

stuffers when the list was being  
prepared so it escaped, we did  
not receive any specimens of the  
Sungus Pelican, but only a head

Besides the 5873 Birds. described  
according to the list there are  
numerous specimens in so bad a  
state as not like for any use to any  
person what shall be done with  
them?

The Catalogue we are preparing will  
contain a detailed list of every  
specimen we have received from  
you both in 1843 & now

I send here with a list of the Mammals  
showing how they and their bones have  
been distributed.

You let me have the list of birds  
for a day the distribution of the birds  
some that has added to it

I should recommend the Bird bones  
to be sent

1. To College of Surgeons
2. To <sup>museum of</sup> Natural History the second  
best anatomical Museum in England
3. Leyden
4. Paris. —

2. 3 & 4. collections will be very  
small in number

Mr Strickland has written today  
he is very much obliged to you for  
having given him some of your  
birds I send his note

15 feet A. some  
of your eggs

Yours Very Truly

J. E. Gray

Mr. Archer desires me to inform you  
the four birds stuffed they come to  
1. 5 0. care and all. Shall they be  
sent to Linnæus or where

I hear from Mr. Kees that they  
have found 50 drawings of birds

at the Zoological Society, but  
they say they are waiting for  
your instruction to deliver  
them -! pray write to them.
